

Understanding controls on YouTube student accounts

When students are signed into their Google Workspace for Education accounts, certain features are disabled for a protected YouTube experience. Autoplay is turned off by default to help students stay in control of their viewing, while comments, live chat, and live streaming are disabled for a more focused learning experience.

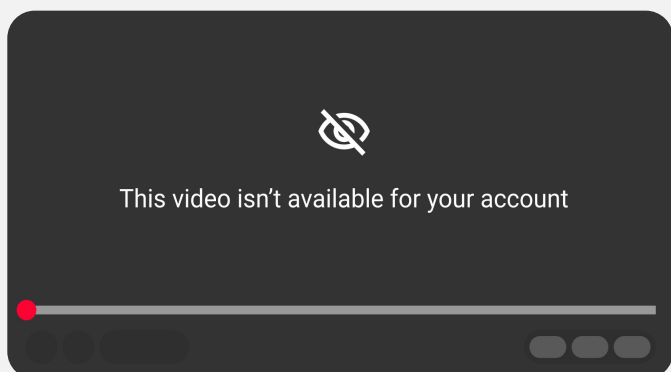

If YouTube is enabled for students, you can provide them with a protected YouTube experience when they're signed in with their Google Workspace for Education account. Built-in content filtering and safety controls allow them to focus on learning.

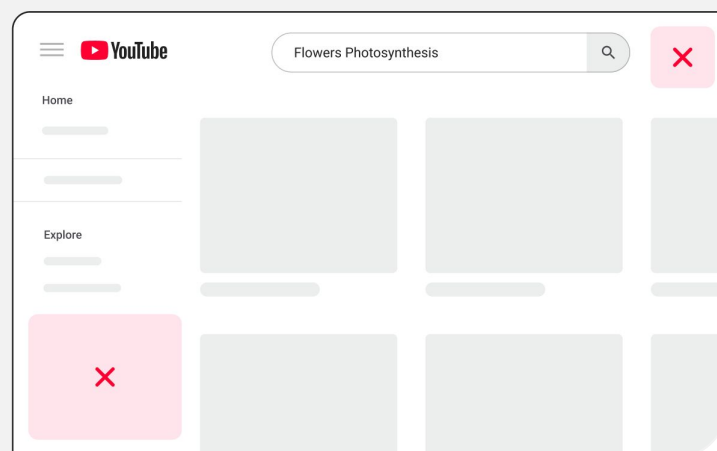

YouTube automatically filters content so that when students are logged in, they can only search for and watch age-appropriate or admin- and teacher-approved videos.

Certain YouTube content that may be inappropriate for students is automatically blocked.

Students logged in with a Google Workspace for Education account won't have access to features like YouTube Shopping, or apps like YouTube Studio and YouTube Music.
