

Manage YouTube settings and permissions for your school

School administrators can set age-appropriate content access and grant approval permissions across your school or district.

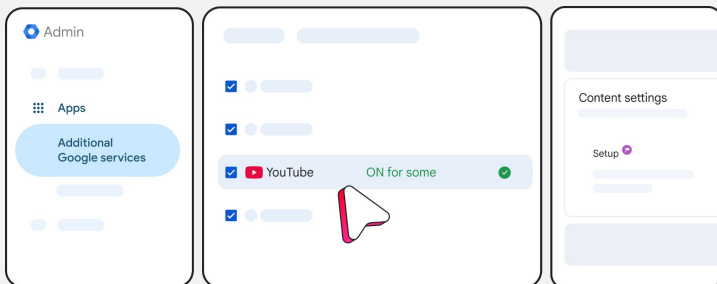

Step 1

Sign in to the Google Workspace admin console, using your school administrator credentials.

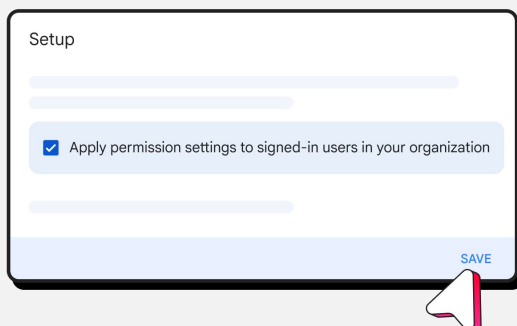

Step 2

From the left menu, go to **Apps > Additional Google services** and navigate to page 2 to select **YouTube**, then **Content settings**.

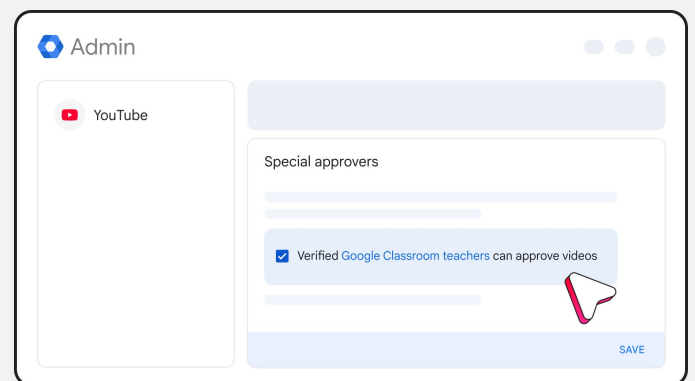

Step 3

Under **Setup**, edit settings to check **Apply permission settings to signed-in users in your organization**, then click **Save**.

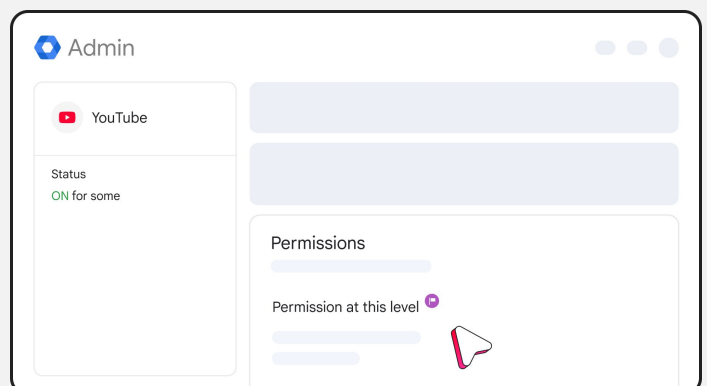

Step 4

Head back to **Content settings**. Under **Special approvers**, check **Verified Google Classroom teachers can approve videos** so educators can approve content for their students outside of the default restrictions.

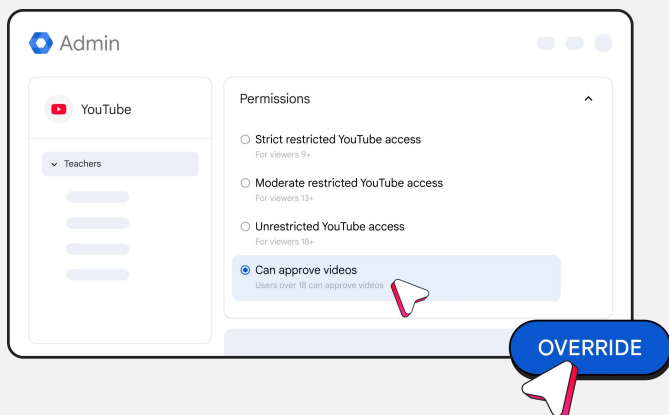

Step 5

Navigate back to **Settings for YouTube** and click on **Permissions**.

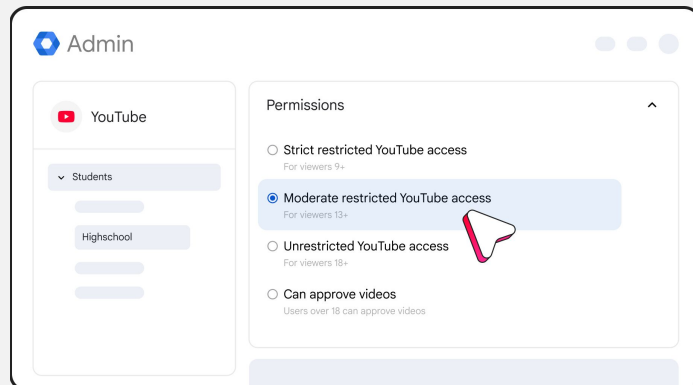

Step 6

In the left-hand organizational units panel, select your **Teachers** organizational unit. Click on the **Can approve videos** button, and select **Override**.

Step 7

Select the student organizational unit to apply tailored restriction levels (e.g., **Moderate restricted** for High School, **Strict restricted** for Middle/Elementary School) and click **Override** then **Save**.
