

Enable YouTube for teachers, and keep it blocked for students

School administrators can set up YouTube access for teachers while keeping it blocked for students.

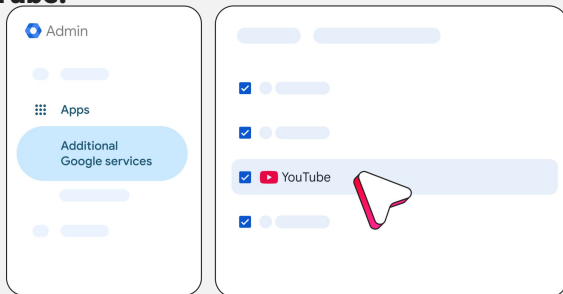

Step 1

Sign in to the Google Workspace admin console, using your school administrator credentials.

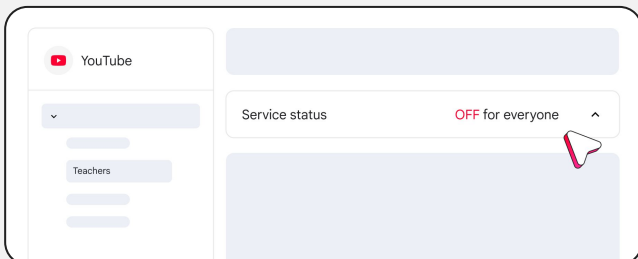

Step 2

From the left menu, go to **Apps > Additional Google services** and navigate to page 2 to select **YouTube**.

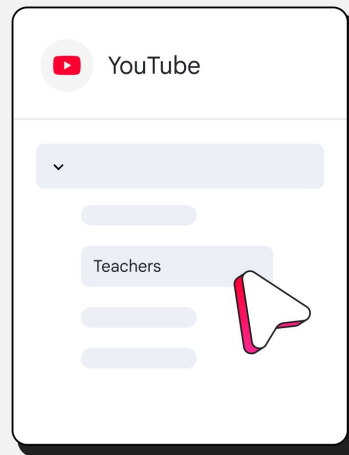

Step 3

Select Service status. Access is set to **OFF** for everyone by default. Here, you can manually configure YouTube access for specific groups within your organization, such as teachers.

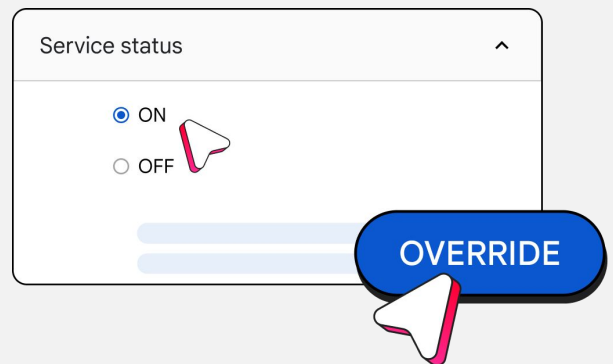

Step 4

In the left-hand organizational units panel, select your **Teachers** organizational unit.

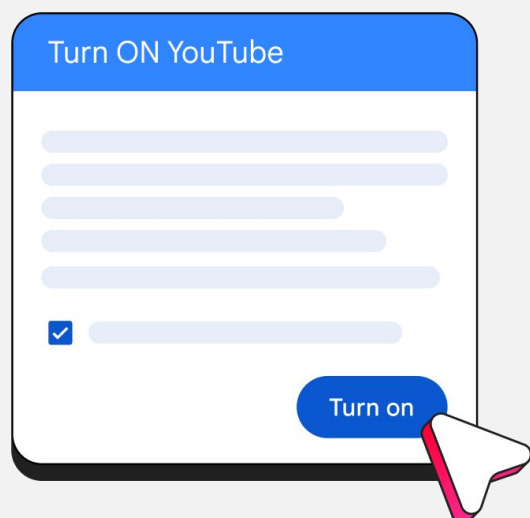

Step 5

Toggle Service status to **ON**, then click **Override**.

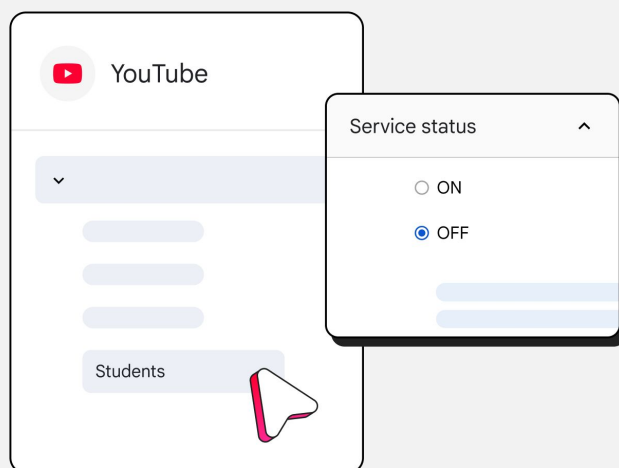

Step 6

Acknowledge the age/parental consent requirements in the pop-up box and select Turn ON.

Step 7

Leave the Students organizational unit set to OFF. You have now enabled YouTube access for teachers, while keeping student access blocked.

Did you know?

Even when student access is turned off, teachers can continue assigning videos through YouTube's Player for Education—an embedded video player integrated within EdTech tools that allows students to view content without ads, recommendations, or other distractions.
